

## Environmental Technician Drainage Services Department

.....

### NG MAN HEI

Associate of Science in Environmental Studies  
Graduated in 2017

Man Hei completed the Associate of Science in Environmental Studies in 2017. In his associate degree study, he gained a lot of solid experience on field courses, environmental impact assessment and monitoring work. During his studies, he built up his network in the field extensively by making friends who were from the same discipline, and that network has helped him immensely in his career development. After graduation, he continued his studies in the Bachelor of Science in Environmental Science programme at Newcastle University, UK. This Bachelor degree programme has helped him further develop various skills: creative thinking, critical thinking, communication and independent thinking skills. These skills would certainly help him face the challenges either in his future career or further studies. Man Hei now works as an Environmental Technician in Siu Ho Man Sewage Treatment Work. It is a chemical effluence treatment plant, and it also owns the biggest solar farm in Hong Kong. The daily monitoring of air and water quality allows him to know more about environmental monitoring and audit and impact assessment. At the same time, he is also pursuing a post-graduate qualification with a Master of Science in Environmental Engineering and Management programme at Hong Kong University of Science and Technology.
